

Adam Tank
Founder & CEO
Industrial Optic (GE Ventures backed corporate spin-out)

Adam Tank currently serves as the Founder & CEO of Industrial Optic, a GE Ventures backed corporate spin-out. The company build submersible robots for the inspection and repair of buried water infrastructure with the goal of saving water utilities time and money associated with the cost of digging up streets for pipeline repair.

Prior to this Adam led GE Water's Digital Water division as their business development and Ventures lead, focused on crafting software solutions for water utilities around the world.

In his spare time, Adam enjoys spending time fishing, reading, and volunteering as an executive coach for Defy Ventures - a non profit helping currently and formerly incarcerated men and women start their own businesses.

He holds degrees in Microbiology & Molecular Genetics from Kansas State University and an M.B.A. from the University of Arizona in Entrepreneurship. He currently resides in the San Francisco Bay Area.
